Rowan Digital Infrastructure
Regulatory Affairs & Public Policy
Denver, Colorado

Dear Selection Committee,

I am writing to express my strong interest in the Regulatory Affairs & Public Policy Associate position at Rowan Digital Infrastructure. The race to build AI-ready data centers is increasingly decided less by technology than by power, permitting, and public trust: whether a utility can serve the load, whether a county will approve the site, whether a community sees the project as a neighbor. Rowan's approach of pairing speed with sustainability and community investment is the kind of development I want to help advance, and a role built around translating business needs into policy action is where I believe I can contribute most.

My work at Holland & Knight has taught me to read legislation the way a business would, asking not just what a bill says but what it changes for an operator, on what timeline, and at what cost. I have learned that the most useful policy analysis ends with a clear recommendation rather than a summary, and I try to write that way for the practice group leaders and former Members of Congress I brief. In Representative DeGette's office, constituent casework on regional energy access and environmental concerns gave me a ground-level view of how infrastructure decisions feel to the people who live near them. I would bring that perspective to Rowan's stakeholder materials and community-facing communications.

Much of this role is coordination, and that is work I enjoy. Following state legislation across many jurisdictions at the National Endowment for Financial Education taught me how differently state legislatures move, and how much depends on knowing which developments deserve attention now. As co-founder of two Georgetown student organizations, I learned to keep many contributors aligned around shared deadlines. I would welcome learning Rowan's project lifecycle, from site acquisition through utility service, well enough to see the policy implications before they become obstacles.

I would be excited to build my career in Denver with a team shaping how the country powers its digital infrastructure. Thank you for your time and consideration. I look forward to the opportunity to discuss how I could contribute to your Regulatory Affairs & Public Policy team.

Sincerely,
Adeline Bean
