ClearPath
Nuclear Program
Washington, D.C.

Dear Selection Committee,

I am writing to express my strong interest in the Nuclear Associate position at ClearPath. I admire ClearPath's pragmatic approach to clean energy: rather than treating climate as a partisan fight, it looks for policies that make American innovation, affordable power, and lower emissions work together. Nuclear fission and fusion sit at the center of that challenge, and I am excited by a role that combines rigorous research with educating policymakers on Capitol Hill about technologies that could define the next several decades of American energy.

At Holland & Knight, I follow federal energy, infrastructure, and environmental developments in Congress and federal agencies, and I write background research and briefings for attorneys and former Members of Congress. I have learned to get up to speed quickly on technical subjects by starting with statutes, agency documents, and hearing records, and then writing for a reader who is smart but not a specialist. I also support the co-leads of the firm's National Security and Defense sector group, which has shown me how closely energy security, supply chains, and national security policy are connected, an intersection that matters for fuel supply and advanced reactor deployment.

I also understand how Capitol Hill consumes information. Interning in Representative DeGette's office, I saw how staff juggle dozens of issues at once and how a short, accurate one-pager or a well-run briefing can earn an organization a lasting place in a policy conversation. Co-founding Georgetown's Undergraduate Law Journal taught me to coordinate contributors, manage deadlines, and carry projects through to publication. I enjoy working quickly when a bill or agency action breaks, and I use AI tools to accelerate research while verifying every fact against the source.

I would be excited to support Jake Kincer and the Nuclear team by tracking legislation and regulation, identifying policy gaps, drafting research products, and helping build Hill events and educational materials that move nuclear innovation forward. Thank you for your time and consideration. I look forward to the opportunity to discuss how I could contribute to your team.

Sincerely,
Adeline Bean
