Center for a New American Security
Technology and National Security Program
Washington, DC

Dear Selection Committee,

I am writing to express my strong interest in the AI Policy Associate position in CNAS's Technology and National Security Program. Decisions about who can access advanced chips and computing power are quickly becoming some of the most important national security choices the United States makes, and I want to start my career helping policymakers make those decisions with an accurate understanding of the technology.

At Holland & Knight, I support the co-leads of the firm's National Security & Defense sector group by tracking hearings, markups, and new legislation, and I have learned that useful analysis starts with the primary sources, such as the bill text or the agency guidance, before any conclusions. In Representative DeGette's office, I researched technology and defense legislation for legislative staff and saw how much they value a concise, honest briefing on a technical issue they do not have time to master themselves.

I am not yet an expert in AI hardware or export controls, but I learn technical subjects by working through them with the experts around me and checking my understanding carefully, and I would welcome the chance to do that under a senior fellow. I am drawn to CNAS because its work bridges the technical and policy communities, and I would bring the same care to fact-checking, writing, and organizing briefings and workshops that I bring to my current work.

Thank you for your time and consideration. I would be excited to contribute to CNAS's research on compute governance, and I look forward to the opportunity to discuss how I could support your team.

Sincerely,
Adeline Bean
