Concurrent Technologies Corporation
Energy, Resilience and Sustainability Division
Arlington, Virginia

Dear Selection Committee,

I am writing to express my strong interest in the Associate Energy Policy Analyst position in Concurrent Technologies Corporation's Energy, Resilience and Sustainability Division. Energy resilience is increasingly a national security question: a military installation is only as ready as the power and water systems behind it. I want to start my career working on that problem in a practical, implementation-focused way, and CTC's role helping federal clients translate lessons learned into real policies and projects is exactly the kind of work I am looking for.

At Holland & Knight, my research spans energy and critical infrastructure as well as national security, and I support the co-leads of the firm's National Security & Defense industry sector group. That combination has shown me how often the two topics converge, whether through supply chains, utilities, or federal programs that fund new generation and resilience projects. My approach is to start with the primary sources, identify what a program or rule actually requires, and then write the shortest clear explanation that helps a client decide what to do next.

I am also motivated by the human side of infrastructure. In Representative DeGette's office, I handled casework on regional energy access and environmental concerns, which taught me how energy decisions are experienced by the people and communities who depend on them. I enjoy compiling and organizing information so patterns become visible, and I am eager to strengthen my quantitative and data visualization skills alongside CTC's experienced analysts. I work well on collaborative teams and take ownership of every deliverable, which I believe matters greatly in client-facing consulting work.

I would be excited to contribute to CTC's mission of keeping our installations prepared in any operating environment while reducing environmental impacts. Thank you for your time and consideration. I look forward to the opportunity to discuss how I could support the Energy, Resilience and Sustainability team.

Sincerely,
Adeline Bean
