Public Citizen
Energy Program
Washington, D.C.

Dear Selection Committee,

I am writing to express my strong interest in the FERC and Energy Regulatory Analyst position with Public Citizen's Energy Program. Decisions made in federal energy dockets reach every household through its utility bill, yet most families never hear about them until the costs arrive. I want to do research that brings those proceedings into the open, and Public Citizen's long record of advocating for households before FERC and the Department of Energy is the model of public-interest work I hope to build my career around.

My studies in Justice and Peace at Georgetown have centered on how institutions distribute burdens and benefits, and my policy work has made those questions concrete. In Representative DeGette's office, I handled casework on regional energy access and environmental concerns, and I saw how difficult it is for ordinary constituents to navigate decisions made far from their communities. At Holland & Knight, I research energy, infrastructure, and regulatory developments and the companies and trade associations involved in them. That work has taught me how influence operates in Washington and how much of it happens in technical forums the public rarely follows.

I approach research with an investigator's habits: go to the primary filing, follow the money and the relationships, verify every claim, and then write it in language a reporter, a congressional staffer, or a family can use. I am eager to build real expertise in FERC proceedings and energy markets quickly by reading dockets alongside your team. Co-founding a student law journal also taught me to manage demanding editorial deadlines without sacrificing accuracy, which I know matters in a deadline-driven advocacy environment.

I would be honored to support Public Citizen's fight for energy affordability and corporate accountability. Thank you for your time and consideration. I look forward to the opportunity to discuss how I could contribute to the Energy Program.

Sincerely,
Adeline Bean
