National Grid
Transmission Business Development, Graduate Development Program
Waltham, MA

Dear Selection Committee,

I am writing to express my strong interest in the Graduate Development Program Associate Business Analyst position on National Grid's Transmission Business Development team. The energy transition in New England will be decided as much in state houses, regional planning forums, and FERC dockets as in engineering plans, and I want to begin my career helping a utility make a clear, credible case to the policymakers and regulators who shape the transmission system.

At Holland & Knight, I have learned that useful policy work starts with understanding why a rule or a proposal exists before deciding what it means for a client. When attorneys ask me to research a bill or a new piece of agency guidance, I read the underlying text and the surrounding record first, then write for the person who has to act on it. Working in Representative DeGette's office showed me the other side of that conversation: what legislative staff actually need from outside stakeholders, and how much a concise, honest briefing is valued when they are weighing competing priorities.

I am not yet an expert in transmission planning or wholesale market rules, but I learn technical subjects by working through them with the experts around me, and I would welcome the structure, mentorship, and rotation the Graduate Development Program offers. I am especially drawn to the role's mix of research, regulatory filings, and direct engagement with policymakers in Massachusetts, New Hampshire, and Vermont, because it pairs the analytical work I enjoy with the relationship-building that makes policy move.

Thank you for your time and consideration. I would be excited to help National Grid shape regional transmission policy in a way that serves its customers, and I look forward to the opportunity to discuss how I could contribute to your team.

Sincerely,
Adeline Bean
