Astranis
Regulatory Team
Washington, DC

Dear Selection Committee,

I am writing to express my strong interest in the Regulatory Policy Analyst position at Astranis. Every satellite Astranis builds depends on an orbital slot, a spectrum assignment, and a license that someone has to win through careful, persistent work before the FCC and the ITU. I am drawn to a role where regulatory research is not an academic exercise but the thing that determines whether a spacecraft can serve its customers, and where getting the final details right is part of the mission of connecting people who have been left offline.

At Holland & Knight, I have learned that good regulatory work starts with understanding a framework from first principles rather than memorizing its outcomes. When attorneys ask me to research a federal rulemaking or a new piece of agency guidance, I read the underlying statute, the docket, and the comments before I write anything, because the most useful analysis explains why a rule works the way it does and where it might move next. Supporting the co-leads of the firm's National Security & Defense industry sector group has also shown me how closely space, communications, and national security policy are intertwined, and how much government customers value a partner who understands the rules they operate under.

I am not yet an expert in spectrum regimes like two-degree spacing or ITU coordination, but I learn technical subjects quickly by working through them with the experts around me, and I would welcome the chance to learn alongside your spectrum engineers and attorneys. I also care about follow-through. Working on constituent casework in Representative DeGette's office taught me that a request to a federal agency is only finished when it is actually resolved, which means tracking every open item and following up until it closes. As co-founder and treasurer of Georgetown's Undergraduate Law Journal and Women in Law Club, I have held myself to that same standard on projects where no one else would have caught a missed step.

I would be excited to help Astranis prepare and track its satellite and earth station applications, write comments that persuade policymakers, and build the institutional knowledge that becomes a lasting advantage for the company. Thank you for your time and consideration. I look forward to the opportunity to discuss how I could contribute to your Regulatory Team.

Sincerely,
Adeline Bean
