Palantir Technologies
Deployment Strategist, New Grad – Warp Speed
New York, New York

Dear Selection Committee,

I am writing to express my strong interest in the Deployment Strategist, New Grad – Warp Speed position at Palantir Technologies. As a Georgetown University senior with experience in policy research, regulatory analysis, and strategic communications, I have learned to work through ambiguous, high-stakes problems and explain them to senior decision-makers. I am drawn to Warp Speed's focus on strengthening American manufacturing and the industrial base, and to a role built around understanding what customers actually need.

As a Public Policy and Regulation Intern at Holland & Knight LLP, I have written more than 50 research memos on legislative and regulatory developments across financial services, emerging technology, national security, and critical supply chains, and the supply chain work in particular has shown me how fragile production capacity can shape national outcomes. Each week I brief practice group leaders and former Members of Congress, synthesizing disconnected streams of information into a clear account of what matters and why. Previously, as a Legislative Intern in the U.S. House of Representatives, I researched appropriations and emerging technology issues and worked constituent cases. That gave me practice understanding a problem from the perspective of the person living it.

I bring user empathy and the ability to communicate across very different audiences. At the International Rescue Committee, I helped refugee families navigate complex systems for housing, healthcare, and benefits. At the National Endowment for Financial Education, I helped increase partner retention by 50 percent and new outreach by 200 percent. My experience co-authoring published client alerts, and leading editors as co-founder and Executive Editor of Georgetown's Undergraduate Law Journal, has made me a precise writer and presenter. I am eager to deepen my technical skills so I can work closely with data and with Palantir's engineers.

I would be excited to begin my career immersed in customers' hardest problems and to help bring Palantir's products to bear on them. Thank you for your time and consideration. I look forward to the opportunity to discuss my application.

Sincerely,
Adeline Bean
