Energy Dome
Public Affairs
Boston, MA

Dear Selection Committee,

I am writing to express my strong interest in the Public Affairs Associate position at Energy Dome. As data centers, electrification, and new manufacturing push electricity demand higher, long-duration storage has become one of the most important questions in American energy policy, and the CO2 Battery is a compelling answer to it. I am excited by the chance to join a company at the moment it is building its U.S. presence and to help policymakers in Congress, at FERC, and in the states understand what long-duration storage can do for grid reliability and affordability.

At Holland & Knight, my daily work is following federal and state energy, utility, and infrastructure developments and explaining what they mean to people who need to act on them. I read bills, rulemakings, and agency proceedings, compare them to existing law, and write memos that tell attorneys and policy advisors what changed, who is affected, and which questions remain open. Preparing background materials and talking points before client meetings with congressional offices and agencies has taught me how much a short, well-sourced briefing shapes a conversation. I also maintain contact and issue trackers for several attorneys, so I understand why disciplined tracking systems matter when relationships span many offices and jurisdictions.

My interest in energy policy began on Capitol Hill. In Representative DeGette's office, I researched energy and environment legislation for legislative staff and watched how a member's priorities form through meetings with constituents, companies, and advocates. That experience showed me that effective public affairs is about being a trusted, accurate resource rather than simply delivering a message. Earlier, at the National Endowment for Financial Education, I followed legislation across many state capitols, which gave me an appreciation for how utility commissions and governors' offices can move faster than Washington. As co-founder of Georgetown's Undergraduate Law Journal, I learned to build something new from scratch, manage many moving pieces, and keep a small team focused on deadlines.

I would be excited to help map key stakeholders across Congress, FERC, ISO/RTOs, and state commissions, track proceedings and market reforms, draft briefings and memos, prepare leadership for meetings, and support coalition work with industry and trade groups. I am eager to grow with a startup bringing a new storage technology to the U.S. market. Thank you for your time and consideration. I look forward to the opportunity to discuss how I could contribute to your team.

Sincerely,
Adeline Bean
