ICF
Transportation Electrification Team
Washington, D.C.

Dear Selection Committee,

I am writing to express my strong interest in the Transportation Electrification Consultant position at ICF. Transportation is now one of the largest sources of emissions in the country, and whether electric vehicles succeed depends less on the vehicles themselves than on the utility programs, rate designs, and charging networks that support them. I am drawn to ICF because its team works on exactly that layer, helping utilities and government agencies design programs that turn electrification goals into infrastructure that people can actually use.

At Holland & Knight, I follow federal and state energy, utility, infrastructure, and clean transportation developments and write memos that explain what a new rule or proceeding changes, who it affects, and what remains unresolved. Reviewing agency filings and program requirements has taught me to read carefully and to separate what a document says from what a client hopes it says. Preparing background materials and agendas before client meetings has shown me how much a clear, well-organized deliverable shapes a conversation, and keeping data and trackers in Excel for several attorneys has made me careful about accuracy, documentation, and follow-up.

My interest in energy policy began on Capitol Hill. In Representative DeGette's office, I researched energy, environment, and infrastructure legislation for staff and saw how local concerns about cost and reliability shape what policymakers are willing to support. That experience convinced me that good research has to answer the practical questions of the people a program is meant to serve. At Georgetown's credit union, I explain technical rules to members in plain language, and at the National Endowment for Financial Education I compared policies across many states, which gave me a feel for how program design varies by jurisdiction. As co-founder of Georgetown's Undergraduate Law Journal, I have also managed a project from first draft to final product with a team.

I would be excited to research charging, managed charging, and utility program trends, support regulatory analysis, prepare client-ready reports and presentations, and help run program operations with careful QA and documentation. Thank you for your time and consideration. I look forward to the opportunity to discuss how I could contribute to your team.

Sincerely,
Adeline Bean
